**Staff Reports**

The Burlington County Regional Chamber of Commerce and business community leaders have been working to develop a "Emerging Leaders" program and will be honored next month by the Burlington County Times and the Burlington County Regional Chamber of Commerce.

"There are many people in Burlington County who are doing brave and remarkable things for the county, but their contributions are not always recognized," said Chamber President and CEO Kim Colby. "Because of this program, we can help business leaders discover new ways to strengthen and support our community.

"Recognizing them through the Emerging Leaders program will benefit the Burlington County Times.

**Stocks show little progress on safety technology**

By JOAN LIVET

WASHINGTON — Many commuter and freight railroads have installed safety technology designed to prevent collisions and derailments, but there is little change in the rate of accidents that have occurred on major railroads, according to an Associated Press analysis of data collected by the Federal Railroad Administration.

"We have little progress on safety technology because many railroads have been slow to install the technology," said Dr. John L. Eisenberg, a Pennsylvania University professor who has studied the area.

"The AP report is an overall summary of major rail system safety technology, and it also shows that many railroads have been slow to install the technology," Eisenberg said.

"The report and data published by the Federal Railroad Administration show that there is little change in safety technology on major railroads," Eisenberg said.

"There is little change because many railroads have been slow to install the technology," Eisenberg said.
